

Problem 1: Use database `poong_kodi_db`

```
-- Use the specified database  
USE poong_kodi_db;
```

Problem 2: ALTER the TABLE by adding a new column "Email" to the "Customers" table

```
-- Add a new column "Email" to the "Customers" table  
ALTER TABLE Customers  
ADD Email VARCHAR(255);
```

Problem 3: ALTER the TABLE by changing the data type of a column in an existing table

```
-- Change the data type of the "Phone" column in the "Customers" table  
ALTER TABLE Customers  
MODIFY COLUMN Phone INT;
```

Note: The syntax for modifying a column may vary slightly depending on the SQL database (e.g., MySQL, PostgreSQL, etc.). The above example is for MySQL.

Problem 4: ALTER the TABLE by deleting a column in the table

```
-- Delete the "Email" column from the "Customers" table  
ALTER TABLE Customers  
DROP COLUMN Email;
```
